

In the first 14 days after surgery sip only RUNNY, THIN fluids. Drinking anything thicker can be painful.

This is due to the pressure being placed on swollen tissues that are still healing from surgery.

This nourishing drinking plan will meet almost all your nutritional needs including protein, fibre, calcium and iron.

How to get started:

1. **Everyday** continue to take your **Easy to swallow multivitamin** to avoid thiamine deficiency.
2. **Everyday** sip, sip, sip enough hydrating fluids to avoid feeling thirsty. In these early weeks you'll feel full quickly and drinking enough to stay hydrated may be difficult. Just do your best, sipping a little more each day aiming for 1 litre (or more) of hydrating fluid.
3. Choose a variety of high quality nourishing protein drinks. Use our **Nourishing protein drinks** list to choose products high in protein (5 g or more in 100 ml) and low in carbohydrate (8 g or less in 100 ml). Then follow the drinking plan below.
4. Your daily drinking plan requires the use of a protein powder. Use our **Enriching protein powders** list to choose a high quality product to help meet your daily protein target. Add enough to your breakfast nourishing protein choice to boost it by 10 g of protein.
5. Use our **What to drink to recover and nourish** table for a list of allowed foods and the **Shopping to recover and nourish** to shop with ease.
6. Download **Enlighten Nutrition's recover and nourish recipes** blueberry and lime smoothie, mango lassi, Mexican taco soup, and pea and mint soup to enjoy the flavours created by our chef (whose a dietitian too).

What to drink everyday

Daily		Your easy to swallow multivitamin		Hydrating fluid (1 litre or more)
Breakfast	20 g of protein from a nourishing protein choice			Protein drink (10 g protein) plus  10g protein
Morning tea	10 g of protein from a nourishing protein choice			Mango lassi (200ml) or  Blueberry and lime smoothie (200 ml)
Lunch	10 g of protein from a nourishing protein choice			Pea and mint soup (200 ml) or  Mexican taco soup (200 ml) or  Protein drink (10 g of protein)
Afternoon tea	10 g of protein from a nourishing protein choice			Blueberry and lime smoothie (200 ml) or  Mango lassi (200ml)
Dinner	10 g of protein from a nourishing protein choice			Mexican taco Soup (200 ml) or  Pea and mint soup (200 ml) or  Protein drink (10 g protein)
Supper	10 g of protein from a nourishing protein choice			Protein water (10 g protein)
